

Christian Crawford

Senior Software Engineer | Frontend Architecture, Complex Product Systems & Modernization

Cincinnati, OH · christian.crawford@pm.me · [linkedin.com/in/christiancrawford](https://www.linkedin.com/in/christiancrawford)

PROFILE

Senior Software Engineer focused on frontend architecture and complex product systems. 20+ years across design, development, consulting, and software engineering, with a focus on building systems that are easier to understand, maintain, and change.

Experienced with React and Next.js applications, configuration-driven and white-label platforms, design systems, accessibility, performance, automated quality systems, and critical healthcare workflows. Brings a design-informed perspective to engineering and experience establishing practical patterns for AI-assisted development.

SELECTED IMPACT

200+ accessibility issues addressed · WCAG 2.2 accessibility seal achieved · 10+ client engagements · 20+ years across design, development, consulting & engineering

AREAS OF EXPERTISE

Frontend Architecture · Complex Product Systems · Design Systems · Configuration-Driven Platforms · White-Label Architecture · Accessibility · Performance · Product Modernization · Automated Quality · AI-Assisted Development

EXPERIENCE

HealthWarehouse.com, Inc. — Cincinnati, OH

Senior Software Engineer | January 2022 – Present

- Lead frontend architecture for a Next.js/React white-label pharmacy platform, using configuration-driven patterns to support multiple brands while sharing core infrastructure.
- Chose to preserve a shared codebase rather than split products into separate applications, containing product variation through configuration and feature flags instead of duplicated implementations.
- Established frontend architecture conventions around Next.js App Router, React, GraphQL, Zustand, MUI, and configuration, including clear server/client boundaries.
- Led accessibility improvements across two pharmacy platforms, addressing 200+ issues and achieving a WCAG 2.2 accessibility seal.
- Established automated accessibility coverage with Playwright and axe-core, auditing ~50 routes across five browser/device profiles plus interaction flows for checkout, patient management, prescriptions, autoreorder, search, forms, and mobile navigation.
- Established automated SEO regression testing across ~80 routes, validating metadata, heading structure, language attributes, structured data, and link accessibility.
- Own frontend development across critical patient workflows including checkout and billing, balancing UX, performance, accessibility, reliability, and healthcare requirements.
- Establish reusable component, theming, state-management, and design-system patterns to maintain consistency across a configurable multi-brand platform.
- Designed and implemented governance practices for AI-assisted development, combining repository contracts, decision logs, lifecycle hooks, quality gates, and approval checkpoints to validate AI-generated changes while preserving architectural consistency.
- Work across design, product, backend engineering, and leadership to turn ambiguous requirements and competing constraints into technical decisions.

Ingage Partners, LLC — Cincinnati, OH

Senior Consultant | July 2017 – December 2021

Worked across 10+ client engagements spanning startups, growing products, and enterprise modernization.

- Built and evolved applications using React, Angular, and JAMstack, contributing to frontend architecture and reusable component patterns.
- Worked directly with clients, product, design, and engineering teams to translate ambiguous requirements into practical technical solutions.
- Contributed to applications integrating Mapbox, AWS, and Contentful.
- Helped modernize existing products while balancing technical debt, usability, maintainability, and delivery constraints.
- Progressed from frontend implementation into broader technical ownership and senior consulting responsibilities.

Developer | March 2018 – April 2021

- Built production applications and prototypes across Angular and JAMstack environments, taking increasing responsibility for frontend architecture and reusable patterns.
- Collaborated across design, product, and engineering and adapted quickly across unfamiliar teams, systems, and technology stacks.

Frontend Developer | July 2017 – September 2017

- Built responsive interfaces and reusable components across client projects.

Kroger — Cincinnati, OH

UI Developer | June 2014 – June 2016

- Contributed to frontend modernization during the evolution of ClickList and internal applications.
- Built responsive interfaces, contributed to internal React applications, and helped migrate systems from WebSphere toward AngularJS.
- Worked within Agile teams to improve consistency, performance, and maintainability across enterprise systems.

CBTS, Cincinnati Bell — Cincinnati, OH

Senior Application Developer | May 2013 – June 2014

- Built full-stack web applications using C#, Razor, and JavaScript, working across architecture, implementation, testing, and production maintenance.
- Designed reusable components and diagnosed performance issues across the development lifecycle.

Trivantis — Cincinnati, OH

Creative Manager | September 2011 – May 2013

- Grew from multimedia designer into creative management, leading web, video, and digital product work.
- Built Drupal and WordPress systems, established design standards, and mentored designers moving into technical roles.
- Connected visual and interaction decisions with the technical systems required to deliver digital products.

Multimedia Designer | March 2008 – August 2011

- Created interactive web and eLearning experiences using Flash, ActionScript, 3D tools, and emerging technologies.

Ginghamsburg Church — Tipp City, OH

Web Designer | October 2005 – March 2008

- Built and maintained the organization's primary website and digital identity using TYPO3.
- Worked across web design, multimedia, and digital communications, establishing consistent visual and technical standards.

EDUCATION

Full Sail University — Associate of Science (A.S.), Digital Communication and Media/Multimedia | 2003 – 2004

TECHNOLOGY

Frontend: React, Next.js, JavaScript, Angular, HTML, CSS

Architecture: Frontend Architecture, Design Systems, Configuration-Driven Systems, White-Label Platforms, Product Modernization

Data & APIs: GraphQL, Apollo

State & UI: Zustand, MUI

Quality: Playwright, axe-core, Automated Testing, Accessibility, SEO Validation, Performance Engineering

Cloud & Platforms: AWS, Contentful, Mapbox, JAMstack

AI-Assisted Development: Agent Governance, Engineering Guardrails, Architectural Validation
